SUMMARY

Computer Science undergraduate (Class of 2026) with strong foundations in Data Structures, OOP, DBMS, and Operating Systems. Experienced in building scalable ML models and developing backend and full-stack applications using RESTful APIs, authentication, databases, microservices, and cloud deployment. Skilled in SQL for data analytics, with knowledge of Machine Learning and AI fundamentals, and proficient in full-stack development using the MERN stack and Next.js.

EDUCATION

Bachelor of Technology in Computer Science and Engineering — Sep 2022 – Jun 2026

Centurion University of Technology and Management, Andhra Pradesh

CGPA: 7.91 / 10 (7 th sem)

TECHNICAL SKILLS

Programming Languages : Python, JavaScript (ES6+), SQL

Backend Development : Node.js, Express.js, Django, Fast API, API Design, Microservices Architecture

Frontend Development : React.js, Next.js, HTML5, CSS3, Bootstrap, Tailwind CSS, Responsive UI, G-Sap

Databases & Data : MongoDB, MySQL, Database Design, Schema Design, Query Optimization, Indexing, Aggregations, CRUD Operations

AI / Machine Learning : Machine Learning Fundamentals, AI Basics, Supervised & Unsupervised Learning, Neural Network Basics, Model Training, Feature Engineering, Model Evaluation

NLP : TF-IDF, Text Preprocessing, Tokenization

CS Fundamentals : Data Structures & Algorithms (DSA), Object-Oriented Programming (OOP), DBMS, Operating Systems

DevOps & Tools : Git, GitHub, Docker, Postman, VS Code

Cloud & Deployment : AWS, GCP, Cloud Deployment, CI/CD Basics

PROJECTS

FlyOBO – Travel Booking Platform — *www.flyobo.com* | Source

Tech Stack: Node.js, Express.js, MongoDB, JWT, React, REST APIs

- Developed and deployed a production-grade travel booking platform actively used by real customers.
- Designed and implemented RESTful API architecture with secure authentication and role-based authorization.
- Structured MongoDB schemas with indexing to support scalable data access and CRUD operations.
- Improved performance and visibility using database indexing and basic SEO practices.

Movie Recommendation System (NLP + TF-IDF) — Source

Tech Stack: Python, Fast API, NLP, TF-IDF, Scikit-learn, Next.js,Node.js, Express.js

- Developed an end-to-end content-based movie recommendation system using Natural Language Processing techniques.
- Performed text preprocessing on movie metadata including tokenization, stop-word removal, and vectorization.
- Implemented TF-IDF vectorization and cosine similarity to compute movie-to-movie similarity scores.

Blogify (Blog Platform) – Microservices Architecture — https://blogify-three-phi.vercel.app | Source

Tech Stack: Node.js, Express.js, MongoDB, Docker, JWT, Nexr.js, Tailwind CSS

- Designed and developed a microservices-based blog platform following service isolation principles.
- Designed and implemented RESTful API architecture with secure authentication and role-based authorization.
- Structured NoSQL and SQL schemas with indexing to support scalable data access and CRUD operations.
- Built a scalable and responsive Blogify frontend using React.js, Next.js, and Tailwind CSS with reusable components and optimized UI performance.

ACTIVITIES & LEADERSHIP

- Actively attend webinars and workshops on AI, Machine Learning, and Cloud Computing.
- Participate in Google Arcade and competitive online coding challenges.
- Mentor junior students during hackathons and academic project development.
- Assist peers with backend development, debugging, and full-stack workflows.
